FIRST SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT
UNDER 37 C.F.R. § 1.97

Commissioner for Patents
PO Box 1450
Alexandria, Virginia 22313-1450

Sir:

Please find, pursuant to 37 C.F.R. § 1.98(a)(1), the enclosed Form PTO-1449 which contains a list of all patents, publications, or other items that have come to the attention of one or more of the individuals designated in 37 C.F.R. § 1.56(c). While no representation is made that these references may be "prior art" within the meaning of that term under 35 U.S.C. §§ 102 or 103, the enclosed listed references are disclosed so as to fully comply with the duty of disclosure set forth in 37 C.F.R. § 1.56.

Moreover, while no representation is made that a specific search of office files or patent office records has been conducted or that no better art exists, the undersigned attorney of record believes that the enclosed art is the closest to the claimed invention (taken in its entirety) of which the undersigned is presently aware, and no art which is closer to the claimed invention (taken in its entirety) has been knowingly withheld.

In accordance with 37 C.F.R. §§ 1.97 and 1.98, a copy of each of the listed references or relevant portion thereof that is not a US patent document is also enclosed.

Statement of Relevance of References Listed
Unaccompanied by English Translation
Under 37 CFR § 1.98(a)(3)

In accordance with 37 CFR § 1.98(a)(3), the following concise explanation of the relevance of each listed reference that is not in the English language and unaccompanied by a translation into English is provided.

French Application No. FR 2 768 528: Input peripheral for a computer with automatic switching between 3D and 2D operating modes, and its interaction process with a display screen. A casing containing a tracking type electromagnetic sensor is fitted with a contactor on one face designed to be placed on a flat support. The contactor makes the device automatically change from a 3D operating mode to a 2D operating mode when it is placed on a flat support, and vice versa when it is lifted off this support.

Japanese Application Publication No. 09/325007: PURPOSE: To provide a three-dimensional position and posture measuring apparatus by which a three-dimensional measurement can be performed stably and at very low costs without being affected by a magnetic field, the temperature of a room and the like. SOLUTION: A light receiving sensor 1 in which four photodiodes D are arranged in positions at equal distances on straight lines at right angles in the central point C of a projection face B, an existing display device and the like are used as an input device. Thereby, an apparatus which is low-cost and which does not require an installation space so much is obtained. In addition, the three-dimensional position and the posture of the light receiving sensor 1 are derived by a geometrical calculation so as to be measured in such a way that observation information on four end points of two line segments by the light receiving sensor 1 is used and that corresponding points, on the display face F of the display device, which correspond to the four end points are found. When such an optical feature is used, the three-dimensional position and the posture can be measured without being affected by an environmental change.

Dated this 19th day of April 2005.
